EDUCATION

Faculdade de Ciências da Universidade do Porto

2023

Undergraduate – Physics Engineering

PROJECTS & EXTRACURRICULAR

Visualization and processing of Geochemical Data

2023

- This was a project done in a python course at “Universidade de Aveiro”, to process files with data obtained from the chemical analysis of a set of rock samples collected in the Lamego region (Portugal)

Coding for automation purpose

University

- I developed various small software tools to streamline tasks for my classes, such as software to plot graphics and analyze data.

Website

2025

- The website that I mentioned above is built with React Native, and it also incorporates React Router and other libraries for sleek and modern design.
- Its purpose is to be used as a portfolio and interactive résumé, allowing recruiters to quickly grasp my capabilities and technical skills. It is structured to be both user-friendly and professional, making it easy for companies to evaluate my expertise.

SKILLS

Programming languages: Python (Advanced), C, SQL, JavaScript, HTML, CSS, MATLAB.

Computer software/ frameworks: React, Git.

Languages: Portuguese (native), English (Advanced).
