Luís Soares

Software Engineer · Computer Science Student

luiscsoares.net · luiscsoares1031@gmail.com · Castelo de Paiva, Portugal

Summary

Computer Science student who builds full software systems: I design services, deploy them on my own servers, test them, and use them daily. Self-taught across Python, React, Linux, and the infrastructure in between. Looking for a software engineering internship or junior role.

Projects

EDITH: Self-Hosted Personal AI Assistant (2026 to Present) Personal project · github.com/Luissoares11/EDITH

- Rebuilt from scratch after Jarvis, my first personal AI: a core for intent parsing, memory, and routing, with separate services for each feature.
- Python/FastAPI server with Claude intent parsing, structured errors, and pytest coverage. Dockerized on Proxmox over Tailscale with GitHub Actions CI/CD.

Calendar App and Notifier (2026) Personal project · github.com/Luissoares11/calendar-app · github.com/Luissoares11/notifier-service

- Calendar service: FastAPI microservice with SQLite, token auth, and a REST API for events, wired into EDITH so I can manage events by chatting.
- Calendar app: React + Vite PWA deployed in Docker and installed on my iPhone over Tailscale HTTPS.
- Notifier: separate service that polls the calendar, applies per-event alert rules and sends real Web Push notifications to my phone.

Fitness Tracker App (2026) Personal project · github.com/Luissoares11/fit-app

- Tracks weekly weight and body photos with a weight chart, goal progress, BMI, and before and after comparison.
- Gym section with weekly plan, exercises by muscle group, and personal records per exercise. FastAPI + SQLite backend with pytest tests, mobile-first React frontend.

Personal Portfolio Website (2025 to Present) luiscsoares.net · github.com/Luissoares11/website-luis

Education

BSc Computer Science (Ciências de Computadores) · Faculdade de Ciências da Universidade do Porto · 2026 to Present

Previously Physics Engineering at the same faculty (2024 to 2026).

Skills

Languages: Python, JavaScript, HTML, CSS, C, MATLAB

Frameworks and tools: React, Vite, FastAPI, Electron, Node.js, SQLite, pytest, Git, PWA, Web Push

Infrastructure: Linux, Docker, Proxmox, Tailscale, systemd, GitHub Actions (CI/CD)

Spoken languages: Portuguese (native), English (C1)
